Programming Fundamentals through "C" Language			
Section	Syllabus	Month	Books
Section- A	Programming process: Problem definition, program design, coding, compilation and debugging. Fundamentals of C: Identifiers and keywords, data types, input and output, type conversion, operators and expressions: Arithmetic, unary, logical and relational operators, assignment operator, conditional operator, and library functions.	August	1. Yashavant P. Kanetkar, Let Us C, BPB Publications, 2018. 2. Vikram Gupts and S. S. Bhatia, Programming Fundamentals through C Language, Kalyani Publishers. 3. Shubhnandan S. Jamwal, Programming in C, Pearson Publications.
Section- A	Control statements: branching, looping using for, while and do-while statements, nested control structures, switch, break and continue statement Functions: definition, call prototype and passing arguments to a function, recursion versus iteration Storage classes: automatic, external and static variables.	September	
Section- B	Arrays: Definition, accessing elements, initialization, passing to functions, multi -dimensional arrays, strings Pointers: address and referencing operators, declaration, assignment, passing pointer to functions, pointer arrays	October	
Section- B	Structures: variables, accessing members, nested structures, pointer to structures, self- referential structures. Files in C: Sequential files, random access files, Unformatted files, Text files, binary files.	November

Computer Organization and Architecture			
Section	Syllabus	Month	Books
Section-A	Boolean Algebra: Boolean operations, Truth Tables, Boolean Laws, K-maps (2,3 and 4 variable maps, don't care conditions). Basic Gates, Combinational logic design: half-adder, full adder, parallel adder.	August	1. William Stallings, "Computer Organization and Architecture". 6th Edition, Pearson Education, 2002.
Section-A,B	Sequential circuits: concept, flip-flops (D, RS, JK, T), counters (Ripple, Asynchronous, Synchronous). Instruction codes, Instruction formats, Instruction cycle, Addressing modes. Register Transfer Language, Arithmetic, Logic and Shift micro-operations, Arithmetic Logic Shift unit	September	
Section-B	Control Memory: Design of control unit, Micro programmed and hardwired control unit (overview only), Features of RISC and CISC Memory Organisation: memory hierarchy, Memory types: cache, associative and other types.	October	
Section-B	I/O organization: I/O interface, Modes of data transfer: Programmed I/O, Interrupt initiated I/O, DMA. Block diagram depicting architecture of 8085 machine.	November	

IInd Semester			
DATA STRUCTURE			
Section	Syllabus	Month	Books
Section- A	Basic concept and notations, data structures and data structures operations, mathematical notation and functions, algorithmic complexity, Big 'O' notations and time space trade off. Arrays: Linear array, representation of linear array in memory, Traversing linear array, insertion and deletion in an array, multi-dimensional array: row-major,	January	1. Seymour Lipschutz, Data Structures, McGraw Hill, 1988. 2. Yashavant P. Kanetkar, Data

	column major order, sparse array.		Structure Through C, BPB Publications, 2003.
Section- A	Stacks: Push and Pop in stack. Representation of stack in memory (linked and sequential) applications of Stack: conversion from infix notation to post fix notations, evolution of postfix notation, matching of Parenthesis, recursion, Tower of Hanoi.	February	
Section- B	Linked list: representation of linked list using static and dynamic data structures, Comparison of Linear and non-linear data structures, Insertion and deletion of a node from a linear linked list, Introduction to doubly and circular linked lists, Application of linked lists.	March	
Section- B	Searching and Sorting: Linear and binary search, Bubble Sort, Insertion Sort, Selection Sort, Merge Sort, Radix Sort and Quick Sort comparison of various searching and sorting algorithms.	April

Object Oriented Programming with C++

Section	Syllabus	Month	Books
Section- A	<p>Evolution of OOP :Procedure Oriented Programming, OOP Paradigm, Advantages and disadvantages of OOP over its predecessor paradigms. Characteristics of Object Oriented Programming.</p> <p>Introduction to C++ :Identifier, Keywords, Constants, Operators: Arithmetic, relational, logical, conditional and assignment. Size of operator, Operator precedence and associativity. Type conversion, Variable</p>	January	<p>1 E. Balagurusa my, <i>Object-Oriented Programming with C++</i>, Tata McGraw-Hill, 2001</p> <p>2 Robert</p>

	<p>declaration, expressions, statements, manipulators. Input and Output statements, stream I/O, Conditional and Iterative statements, breaking control statements.</p> <p>Storage Classes, Arrays, Arrays as Character Strings, Structures, Unions, Bit fields, Enumerations and User defined types.</p>		<p>Lafore, <i>Object Oriented Programming in Turbo C++</i>, Galgotia Publications, 1994.</p>
Section-A,B	<p>Pointers :Pointer Operations, Pointer Arithmetic, Pointers and Arrays, Multiple indirections, Pointer to functions. Functions: Prototyping, Definition and Call, Scope Rules. Parameter Passing: by functions, recursion, function overloading, Default Arguments, Const arguments, Pre-processor, Type casting.</p> <p>Classes and Objects :Class Declaration and Class Definition, Defining member functions, making functions inline, Nesting of member functions, Members access control, this pointer, Objects: Object as function arguments, array of objects, functions returning objects, Const member. Static data member and Static member functions, Friend functions and Friend classes.</p>	February	
Section-B	<p>Constructors: Properties, types of constructors, Dynamic constructors, multiple constructors in classes.</p> <p>Destructors: Properties, Virtual destructors, Destroying objects, Rules for constructors and destructors. Array of objects. Dynamic memory allocation using new and delete operators, Nested and container classes, Scopes: Local, Global, namespace and Class.</p> <p>Inheritance: Defining derived classes, inheriting private members, single inheritance, types of derivation, function redefining, constructors in derived class, Types of inheritance, Types of base classes, Code Reusability.</p>	March	
Section-B	<p>Polymorphism: Methods of achieving polymorphic behavior. Polymorphism with pointers, virtual functions, late binding, pure virtual functions and abstract base class.</p> <p>Operator overloading: over loading binary operator, overloading unary operators, rules for operator overloading, operator overloading using friend function. Function overloading: early binding.</p>	April	

	Difference between function overloading, redefining, and overriding.
